

Panel Event: Expanding development diagnostics

November

11:00 am -
2:00 pm

Oxford Policy Management (OPM) has the pleasure of welcoming a distinguished panel to discuss:
Thicker Diagnostics: Expanding development diagnostics.

Location

François Bourguignon, Stefan Dercon, Sue Parnell, Lant Pritchett and Kunal Sen will discuss diagnostics in development, from historical applications, to contemporary approaches.

Oxford Policy Management
Clarendon House, Level 3
52 Cornmarket Street
OX1 3HJ Oxford

Drawing on personal experiences the panel will compare the strengths and weaknesses of diagnostics and how they can be used to tackle global developmental challenges, such as conflict, the Sustainable Development Goals and disruptive technologies. The panel will also look at the possible fusion of diagnostic approaches, to include political analysis and economic and technical approaches, to produce a 'thicker diagnostic'.

Once political analysis is added to growth diagnostics, emerging results differ. The panel will consider the implications for 'thicker diagnostics' applied to sectors, to cities and regions, and to countries in conflict.

The panel will be chaired by OPM's Acting CEO and Chief Economist, Mark Henstridge.

The discussion will include a Q&A session and will be followed by lunch.

The event will include a practical application of how to do a 'thicker diagnostic', using current project examples, led by OPM's Principal Economist, Stevan Lee and Senior Economist, Umar Salam.

We look forward to welcoming you to Oxford and Oxford Policy Management.
